## Chemical Fume Extraction System For Hair Salons - Model Salon Pure Air-HJR

Model SPA-HJR  
Chemical Fume  
Extraction System

The Salon Pure Air Model SPA-HJR is appropriate for stylists who prefer the 9" diameter hood to be positioned at the side of the client's head. It is designed to adsorb and remove formaldehyde, glutaraldehyde, and other vapors generated by the various Keratin Smoothing Treatments.

This High Performance System is designed for moderate fume removal applications. It includes a special blend of acticated carbon with a well developed pore structure, providing a wide range of molecular adsorption. It controls a wide range of molecular weights, making it ideally suited for all general commercial and industrial air filtration applications requiring chemical filtration.

Both Salon Pure Air Chemical Fume Extraction Systems for Hair offer a specially designed Adsorption Module with a V-Bank configuration, providing high efficiency contaminant removal. This superior design prevents bypass, and provides an even bed thickness. It is designed for use at a maximum air velocity of 250 fpm. Servicing/refilling this module is made simple with a one-piece lid.

In addition, the Salon Pure Air SPA-HJR lowers exposure to a variety of other harmful chemicals generated by additional processes such as coloring, highlighting and permanent treatments.

### SPA-H INCLUDES:

- Single 3" diameter inlet with Self-Supporting 3" diameter Source Capture Extractor Arm and 9" diameter Hood
- Pleated Prefilter
- Primary Adsorption Module with several pounds of a special blend of Activated Carbon
- Multi-Density Polyester Panel Filter
- Heavy Duty Casters
- Wireless Remote Control
- Exhaust Directional Outlet Deflector
- Available in Black or White
